Catalogue Cutsheet - "Sandstorm" Cartridge Filter Vessel

Each Sandstorm filter vessel is designed to meet or exceed your filtration needs.

Advanced designs are employed to extend filter cartridge life, using zero-maintenance internal elements to perform the majority of separation work. The cartridges themselves are customizable to your process and documented with a project-specific part number. Vessel dimensions are endlessly adjustable to fit your exact site layout, and can be designed vertically or horizontally. Common options include a pneumatically-actuated level control system, flange/elbow drains, DP taps and gauge, and supports. Standard dimensions are not available at this time.
