Catalogue Cutsheet - "Zero-G" No-Maintenance Gas Separator

The Zero-G provides a lean design for zero-maintenance gas separators, minimizing material costs while meeting or exceeding particulate removal efficiency. Internal components are configured as needed, with inlet diffusers, mesh pads, separator vane packs, and even centrifugal separator elements. External dimensions can be endlessly adjusted to your exact site layout needs, and the vessel can be configured in a vertical or horizontal orientation. Common options include a pneumatically-actuated level control system, flange/elbow drains, DP taps and gauge, and support legs. Standard dimensions are not available at this time.
